

Important Refactorings

Rename

- change variable name
- change method name
- change method signature

Extract and Inline

Extract and inline are opposites.

- extract local variable
- extract constant
- extract parameter
- extract field
- extract method
- inline local variable
- inline constant
- inline field
- inline method

Class creation and alteration

- extract method object
- extract parameter object
- extract delegate
- extract superclass/interface/subclass
- make method static
- move method
- move class
- pull members up
- push members down

Manual Refactorings

- Moving code (see new refactoring book)
- Split loop (see new refactoring book)
