# Day 12 Lesson Plan

**In Class**

User story estimation

**Reading**

- Do with partner:

- Advanced TDD 1[1]

  - Open up IntelliJ and follow the same steps as Uncle Bob does as he goes through them in the video.

  - Uncle Bob made a lot of weird steps when he was refactoring (especially many manual changes instead of using a refactoring step or an intention step). Identify as many as you can and propose better ways to do it.

  - Add a test for names with a middle initial, and adjust the code to handle that case.
